The vesicular glutamate transporter 1 VGLUT 1, also referred to as BNPI and SLC17A7, was originally identified as a brain specific phosphate transporter. Like the related VGLUT 2, VGLUT 1 is both necessary and sufficient for uptake and storage of glutamate and thus comprises the sole determinant for a glutamatergic phenotype. Both VGLUTs are different from the plasma membrane transporters in that they are driven by a proton electrochemical gradient across the vesicle membrane.

VGLUT 1 and VGLUT 2 show complementary expression patterns. Together, they are currently the best markers for glutamatergic nerve terminals and glutamatergic synapses.

**Immunogen**

Recombinant protein corresponding to AA 456 to 560 from rat VGLUT1 (UniProt Id: Q62634)

**Reactivity**

Reacts with: rat (Q62634), mouse (Q3TXX4), human (Q9P2U7), cow.

**Other species not tested yet.**

**Specificity**

Specific for VGLUT 1. (K.O. verified)

**matching control**

135-3P

**Remarks**

VGLUT 1 aggregates after boiling, making it necessary to run SDS-PAGE only with non-boiled samples.
